

MOBILE SOLUTION FOR CARE COORDINATION

Sharing information is key to provide efficient care.

Orchestrating patients care coordination require that information reach each member of a care team in a timely manner.

Quarress mobile solution connects care team members supporting **information sharing** and **access**.

It reduces :

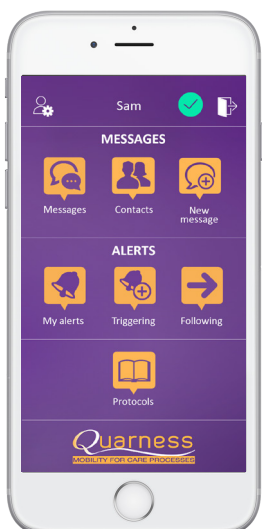

stress

wasted time

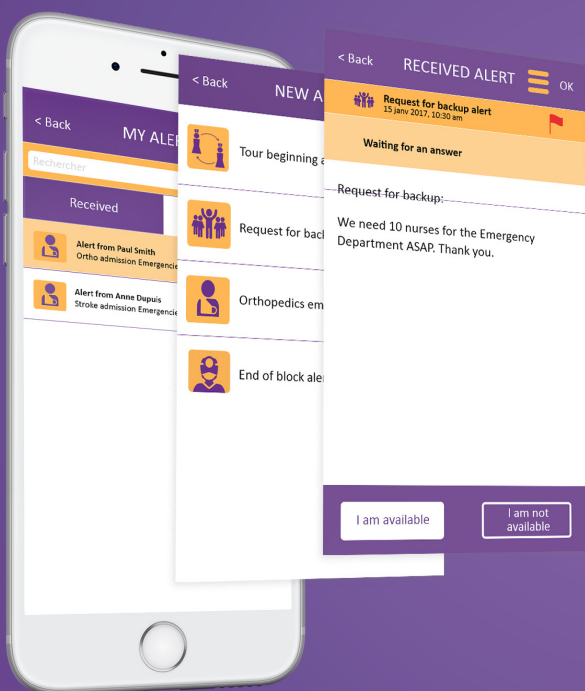

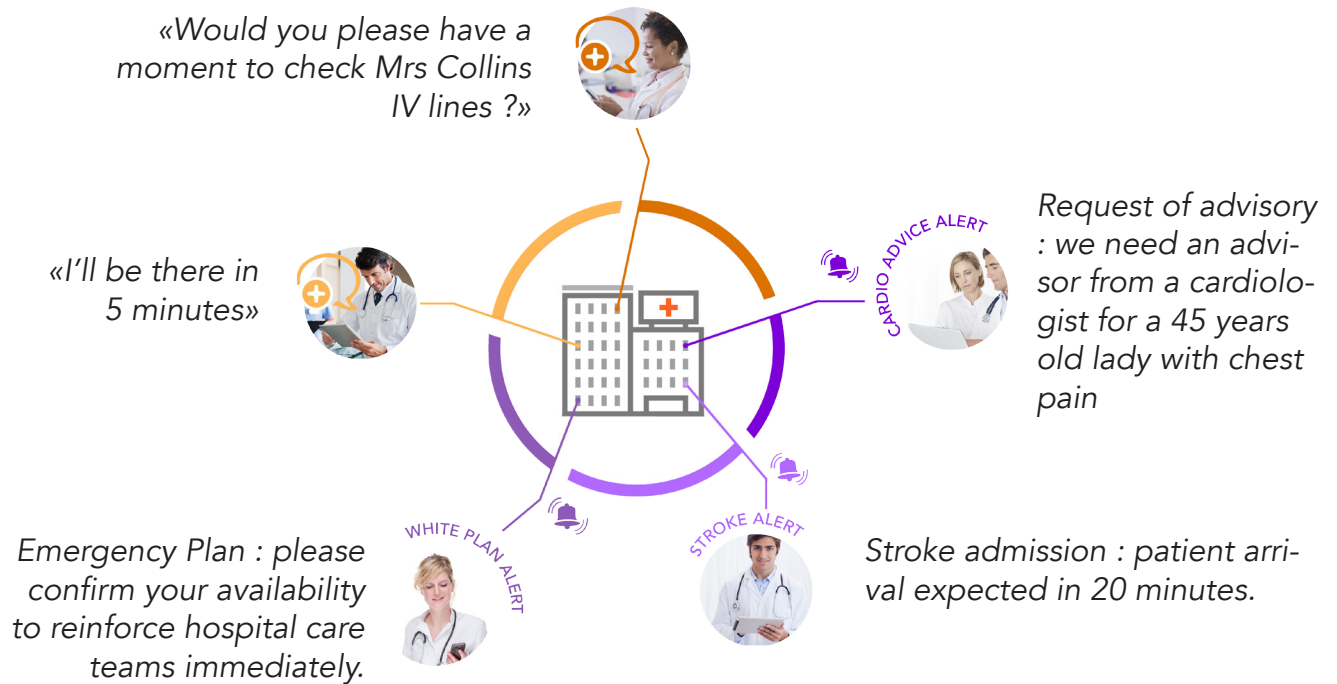

risks of errors

Quarress mobile solution can be adapted to your specific care processes and information workflow using pre defined alerts.

- Synchronising care team on events
- Sharing critical information in real time
- Reducing wasting time chasing for people or information
- Eliminating task interruptions due to intempestive phone calls thanks to its secure mobile messaging

Recurring and critical events can be communicated at the right time to the right members of care teams. Alerts can be sent by care giver or automatically extracted from your EMR.

Distributing critical information in a click at the right time to the right care team member. Less time coordinating teams means more time for patients care.
